

# Clinical Instructors and Pyxis Education

## Pyxis Medstation Training

**All Instructors of student groups will be required to have training and access to Pyxis** in order to supervise nursing students in the complete process for closed loop medication administration.

**Instructors of student groups will need to review the Pyxis Checklist to support their learning.**

New Instructors to St. Joseph's will also be required to attend an in-person demonstration of the system with one of the Professional Practice Consultants. Contact the Student Affairs Administrator to schedule in-person training.

**Once the training is completed,** Student Affairs will initiate Instructor access to the Pyxis system by sending documentation to Pharmacy, and the **Professional Practice nurse will authorize this access.** You will be able to gain access to pyxis via your Network login.

Returning Instructors are required to complete the **on-line Pyxis learning annually.**

**Required e-learning & Declaration** - Generally, Instructors of student groups must complete the same e-learning as the students they are teaching. The instructors will sign the declaration form that the e-learning has been completed and will **sign the privacy and confidentiality declaration printed out from the privacy e-learning module and will provide both documents to the school to keep on file.** Instructors of student groups who teach multiple terms at St. Joseph's must complete this e-learning annually.

**Please note:** Requirements #3 - #5 above do not apply to clinical instructors who are employees of St. Joseph's Health Care London. However, there is still a need to complete Requirements #1 and #2, and to send proof of immunizations to you School and your LearningEdge Certifications report to Student Affairs.
