A video virtual care appointment with your health care professional is one where you communicate with and see each other on a videoconferencing platform, like FaceTime or Zoom. You'll use a smartphone or other device and the internet, instead of coming to the hospital in-person. Virtual care appointments follow all the same provincial rules and regulations as in-person appointments. Many who use this type of appointment are finding significant benefits including the ability to have a health care appointment without travelling. Here are some tips on ensuring a smooth experience.

STEP 1: What You Need for Joining the Appointment

A fully charged device – tablet, computer or smartphone – with a camera, microphone and speaker (most are built in)

Internet connection that's reliable and password-protected

Your valid Ontario Health Card or equivalent

A list of your current medications, or have your medication bottles with you

Any communication aids you need – reading glasses, hearing aids, etc

List of questions for your health care professional and paper/pen to take notes

Please Contact the Clinic Directly:

To cancel or reschedule the appointment

To request an interpreter or assistive device

To let us know that you do not have access to a device and/or internet; other arrangements will be made

STEP 2: One Day Before the Virtual Care Appointment

Review device, internet and browser requirements for [Webex](#) or [OTN](#), depending on which platform is indicated in your emailed appointment. Run a test before the appointment for [Webex](#) or [OTN](#) **on the device you will be using**. Ensure your device privacy settings allow access to your camera and microphone.

STEP 3: 15-Minutes Before the Virtual Care Appointment

Go to a private, well-lit, quiet place if possible. If you would like a family member or caregiver to be with you during the appointment, send them the emailed appointment or have them in the room with you.

Join the appointment 15 minutes early to ensure you leave some time for troubleshooting any issues. For help, call the Webex or OTN phone numbers at the top of this document. If you are running late for the appointment, please contact the clinic to advise you are still planning to attend. Please be patient as your health care professional may join the appointment after the start time.

STEP 4: During the Virtual Care Appointment

At the start of the appointment, the health care professional will confirm your personal information and explain what to expect during the appointment.

Optimize Your Audio and Video

Audio and video problems are the most common challenges of virtual appointments. Here are some suggestions:

Test audio/video settings prior to joining the appointment

When you log in, look for the mute/unmute button and unmute when you want to speak

Have a backup device if possible

STEP 5: Troubleshooting

Time-lag Between Audio and Video

1. Try logging out and re-joining the virtual care appointment.
2. If that doesn't work, and the delay is causing difficulty, the health care professional may use your landline or cellphone for audio instead.

If You Log Out of the Appointment by Accident

1. Exit the virtual care appointment platform.
2. Open your scheduled virtual care appointment email.
3. Click on the link to join the appointment again.

The Appointment Freezes or Disconnects

1. The health care professional may shut down the virtual care appointment and re-start the appointment.
2. Wait a few minutes, open your virtual care appointment email, and click on the appointment link to join again.
3. If the appointment doesn't restart the health care professional will call your phone number.
4. If the system is not working and we can't reconnect, you will be contacted by the clinic to reschedule.

Virtual Care Considerations

Web Etiquette

Attending sessions from the comfort of your home may feel more casual than an in-person appointment. Please continue to conduct yourself in a manner similar to in-person appointments.

Please dress appropriately for the tasks you will be doing during the appointment (e.g. comfortable clothing if you will be moving around).

Privacy

Keep in mind that during video virtual care appointments, our health care professionals are able to see your space. Think about where you will be sitting and establish a camera angle that meets both the visual needs of your appointment as well as your personal comfort level with having the background space visible within the camera view.

Safety

If we are asking you to stand up and move around, please ensure your floor space is clear and there are no tripping hazards. Please have a phone available and/or a support person to call for assistance as needed.

If you have any questions or concerns about your video virtual care appointment, contact your clinic or health care professional.
